The app itself is beautifully designed, offering a clean and modern look that reflects its content-heavy nature. Its UI is predicated upon a uniform grid of colored and blacked-out squares, which can be moved around to highlight different areas of the app, as well as added or removed on demand. You can even arrange the squares yourself using drag-and-drop, without getting your hands dirty with a numerical keyboard grid. Also familiar from other Adobe apps, you'll find a very handy "tags" feature, which might turn out to be less useful the more often you use it. Another useful feature is the ability to share your current document via its "Share" feature. That way, you can get all of your friends and colleagues to edit it as well. There's also a font panel and our favorite - the ability to lock and unlock your work with a password. This is a superb feature, especially because it works on all of your devices. All of these features, hardware and software, work exceptionally well when compared to other apps on the current Apple App Store. In fact, if the iPad Pro doesn't yet have all of the features you need in a digital photo editor, there's no better alternative out there. Also, while Photoshop is normally always available on any of your devices, you can lock it so that it is only visible for about as long as you want. The latter works like a charm, allowing you to work on the iPad Pro for a long time, but close the app without losing your work. **ABOVE:** A two-page spread in a four-page spread on a 6th-generation iPad Pro with the Camera Connection Kit (CCK), featuring two of the photos from our previous review of Adobe Photoshop CC . **BELOW:** A layout created with the pen in Photoshop CC on an iPad Pro.
